2025/11/18 03:09 1/1 Ubuntu

Ubuntu

Small tips to hopefully make your life easier. Anything in a code block should be run on the command line.

Is package 'x' installed?

As we can see from the above output, the package is installed.

```
$ dpkg -l | grep foobarbaz
$
```

No output in this case means that grep could not find package or description that matched your search query.
