How Roles are Used

The site uses roles to allow functionality. For example, an account that has the role of `Student` is able to update their own record. An `Instructor` account can modify course history of students and perform other actions. In additional to the application roles of `Student`, `Instructor`, `Advisor`, and `Committee`, the site also has separate roles for `Student Admin, Instructor Admin, Advisor Admin, Administrator, Application Root''`. Some role functionality is not documented.
