

# Quota

## Check your quota

To check your quota use the command 'csquota' which is just a wrapper script around 'quota' (because bugs). You should see something like this:

```
user@computer:~$ csquota
Filesystem                space  quota  limit  grace
server.cs.uchicago.edu:/export/homes/user  918M   2000M  2500M  15296
```
