Status

2020-12-21: Linux1,3,4,5 are being rebuilt with Ubuntu 20.04.

1. Linux2 is available for use right now.

2020-12-21: vdesk service is being rebuilt

I expect the service to stay up, mostly. Nodes will be going up and down depending on when they get rebuilt so expect disconnections if you HAVE to use this service.
