Status

2020-12-21

Linux1,3,4,5 are being rebuilt with Ubuntu 20.04

1. Linux2 is available for use right now.
2. linux1,2,3 are now available.

vdesk service is being rebuilt

I expect the service to stay up, mostly. Nodes will be going up and down depending on when they get rebuilt so expect disconnections if you HAVE to use this service.

2020-12-[17-18]

Peanut Slurm Cluster rebuild to 20.04

1. Rebuild of all nodes to 20.04
2. user to slurmdbd sync took longer than expected.
